Welcome to your Insights!

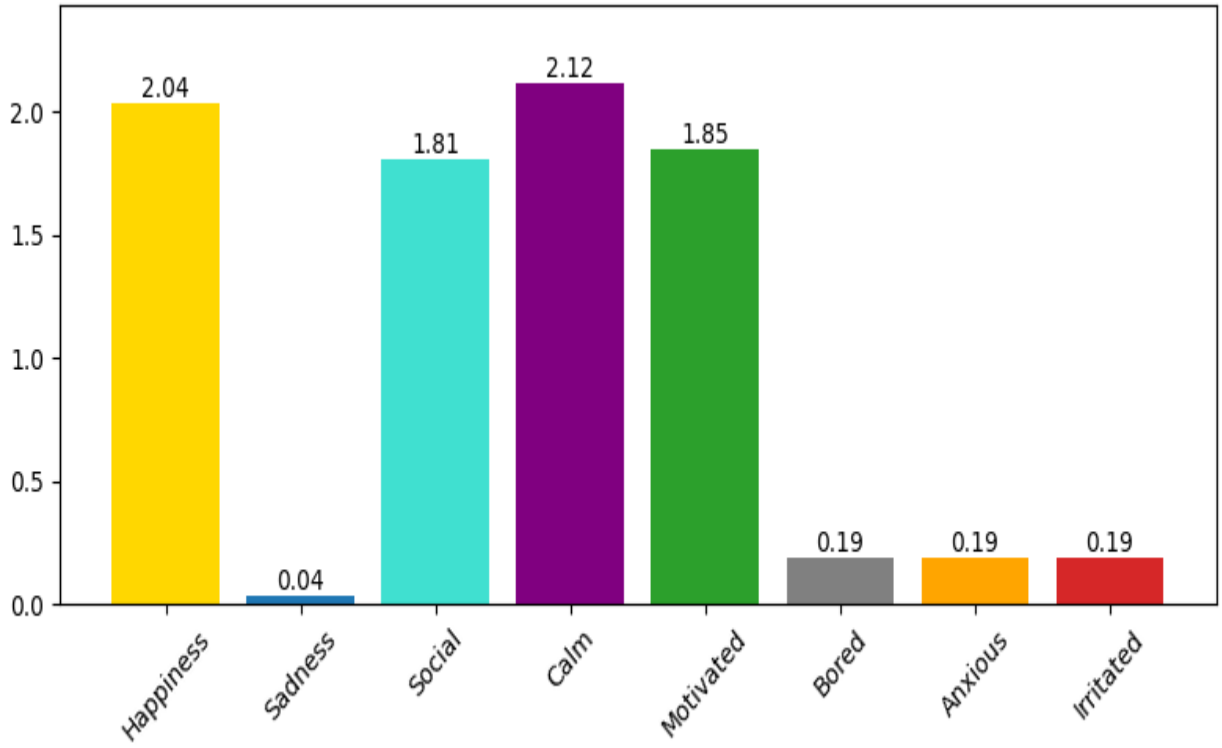

Below you will find insights and trends related to your behavior and reported emotions over the course of the study. Please review with your clinician in your next session.

The number at the top of each bar is the average score of an emotion you felt over the course of the study, ranging from 0 (no emotion) to 3 (greatest amount)!

The taller the bar is, the more you felt that emotion over the last few weeks!

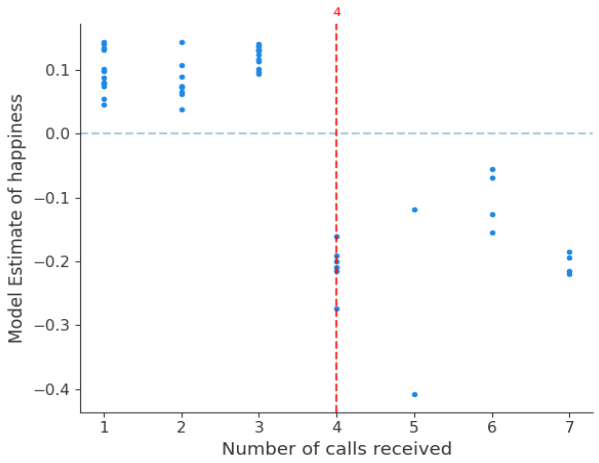

Psst: scroll down to see how your actions corresponded with your feelings!

Over the last few weeks...

Happiness

When you received fewer than 4 calls in a day, you were more happy.

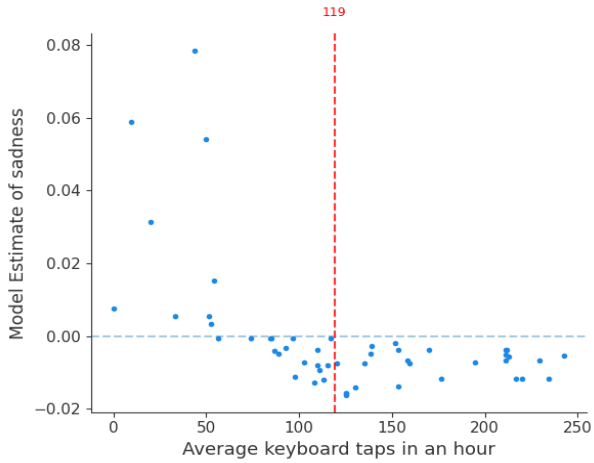

Also...

1. When you were on calls for less time, you were more happy.
2. When your slowest movement was faster during the daytime, you were more happy.

Sadness

When you tapped your keyboard, on average, more than 119 times in an hour, you were less sad.

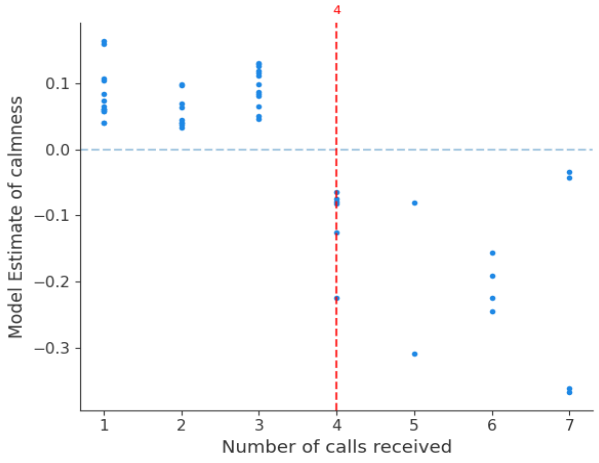

Also...

1. When your movements were less varied, you were less sad.
2. When you typed more words, on average, you were less sad.

Calm

When you received fewer than 4 calls in a day, you were more calm.

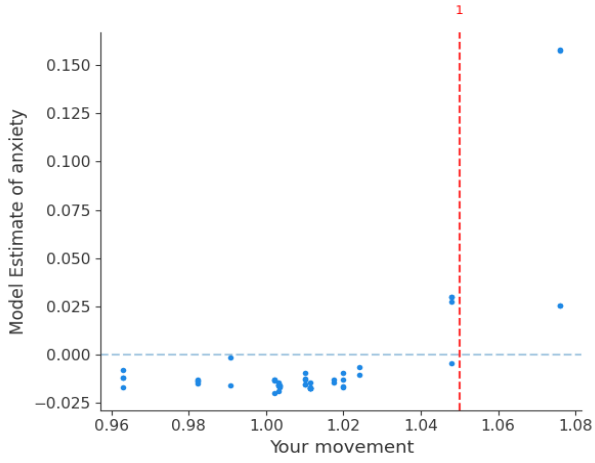

Also...

1. When you were on calls for less time, you were more calm.
2. When you made fewer phone calls, you were more calm.

Anxious

When your movement during the day was slower than walking, you were less anxious.

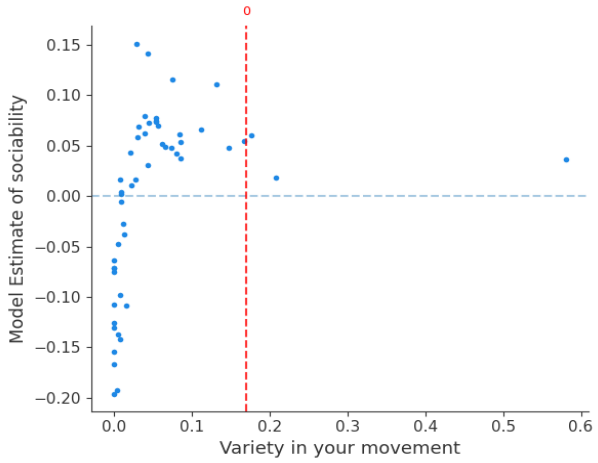

Also...

1. When your slowest movement was faster during the daytime, you were less anxious.
2. When you were moving more, you were less anxious.

Over the last few weeks...

Social

When your movements were more varied, you were less social.

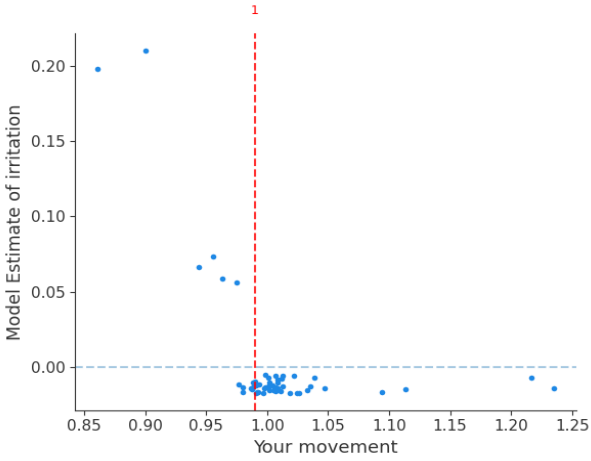

Also...

1. When you traveled shorter distances, you were less social.
2. When your battery was low, you were less social.

Irritated

When your movement was faster than walking, you were less irritated.

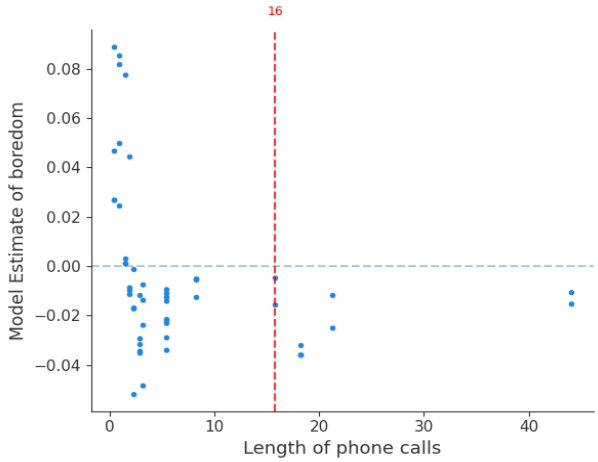

Also...

1. When your phone screen was awake (includes checking the time, receiving notifications) less times, you were less irritated.
2. When you unlocked your phone less, you were less irritated.
